

Disk and FS Specs

- ldisk: 64 blocks
- block = 64B = 16 integers
- block 0 holds bitmap: 64 bits (one per block) = 2 integers
- descriptor: 4 integers
 - file length (1 int)
 - 3 block #s
- # of descriptors: 24 = 6 blocks
- descriptor 0 describes the directory
- each directory entry: 2 integers
 - file name: maximum 4 chars, no extension (1 int)
 - descriptor index: 1 integer
- ldisk can be saved into a text file at any point with the *sv* command
- ldisk can be restored from a previously saved text file using the *in* command
 - a new empty ldisk is created if no saved file is given
- directory is opened automatically with *in* command (OFT index = 0)
- OFT has 4 entries: directory plus up to 3 other open files
- all files (including directory) must close with *sv* command
- destroying an open file is ok (not an error)
- every open command must use the first available slot in the OFT (smallest index)
